PROFESSIONAL SUMMARY

Full Stack Developer with 3 years of experience specializing in Ruby on Rails and JavaScript, with a focus on automation and data processing, infrastructure management, mobile application development, and deployments. Committed to writing clean, maintainable code that follows DRY principles.

TECHNICAL SKILLS

Core: Ruby on Rails, Ruby, JavaScript, TypeScript, React Native (Expo), PostgreSQL, Redis, SQLite, ActiveAdmin, Python, Django

Automation & Integrations: Puppeteer, cURL, Delayed Job, REST APIs, GraphQL, data reconciliation

Infrastructure: AWS (EC2, S3), DigitalOcean, Nginx, systemd, Bash, Git-based CI/CD

PROFESSIONAL EXPERIENCE

Full Stack Developer | Invictus Business Solutions — Aug 2023 – Present

Automation & Marketplace Integrations

- Automated OTP login, claim lifecycle management, and web scraping with Puppeteer and cURL, **saving 8+ hours/day**; built XLSX/CSV processing scripts that save a further **12+ hours of manual work daily**
- Integrated claim, listing, rate-card, and payment workflows across **four marketplaces** (Flipkart, Myntra, Meesho, Amazon); fully automated claim raising and status sync, **eliminating manual claim submission** for sellers
- Built CSV-based claim submission with failed-claim email alerts to the ops team, **raising thousands of claims per month**
- Optimized report generation across marketplace platforms, **cutting build time from hours to minutes**

Infrastructure & Deployment

- Help manage **7+ production servers** with high availability and zero downtime using systemd and email alerts
- Built Git-based deployment scripts to automate application updates without restarting Delayed Job workers, eliminating manual stop, remove, and re-add steps. Automated server restarts, execution of required database migrations, and crontab updates to ensure seamless deployments with the latest code
- Built an automated backup pipeline: daily database dumps to a backup server and weekly offsite copies to S3, with lifecycle policies for retention and cost control
- Automated recurring tasks and long-running background processes with cron and nohup, removing the need for manual runs

Backend & Mobile

- Built REST APIs and React Native apps for an Order Management System used by **150+ users** across multi-location warehouse teams, including handheld terminal (HHT) scanner integration with scan-once, update-everywhere sync
- Refactored legacy Rails applications, **improving application load time 2x**
- Refactored a legacy native mobile app and am currently building **four new mobile apps**

PROJECTS

AWS S3 File Downloader | Node.js, AWS S3 — GitHub

- A Node.js utility that downloads files from an S3 bucket by file key, useful for pulling images or videos.

BlogCord | Astro, JavaScript — GitHub | Demo

- An Astro blog template with a Discord-inspired theme.

Jelly Spinel Beans Theme | Node.js — GitHub | Demo

- A VS Code theme blending Jellybeans and Shopify Ruby.

Ultimate Football Dashboard | Python, Django, REST API — GitHub | Demo

- A Django dashboard for football fans covering Premier League clubs, teams, matches and standings

EDUCATION

BSc Information Technology | Thakur College | GPA: 8.3 — 2020 – 2023

CERTIFICATIONS

Meta (Coursera): JavaScript, React Basics, Advanced React | **Codédex:** Python
